## Flap Wheel

### A Consistent Finish that Saves You Time & Money

When it comes to getting the job done rapidly and consistently, the Flap Wheel is the best choice. The overlapping abrasive flaps will wear down after extended use and gradually expose the fresh grains underneath, enabling the user to achieve a more consistent and cost effective finish.

Our flap wheels are available with a selection of either Zircon (Zir) or Aluminium Oxide (A/O) and Aluminium Oxide Ceramic (A/OC) abrasive grain materials and also solid metal or wooden centre which can be mounted directly into machine shafts. The flexibility of our flap wheels are designed with simplicity in mind to enable even the most novice operators to achieve an optimum grinding result.

#### Recommended Usage & Application

Some of the most common applications of abrasive flap wheel are de-burring of metal surfaces such as aluminium and zinc die-casting, turbine blade stress relief, grinding and preparing the metal surface for further finishing process such as plating and anodizing.

#### Point of Interest

Zircon grains are mainly used for hard metal surfaces such as stainless steel whereas Aluminium Oxide is recommended for softer surfaces such as aluminium and zinc die-cast.
